

Expert Teams – Hospitalization

Case-Based Learning & Mentorship

Tuesday, May 16, 2023

Facilitator: Julie Moss, ESRD National Coordinating Center

Meeting Logistics

- Call is being recorded
- Participants can unmute themselves
 - Please stay on mute unless you are speaking
 - Do not place the call on “hold”
- Everyone is encouraged to use the video and chat features
- Meeting materials will be posted to the ESRD NCC website.

Who Is On The Call?

Clinician and
Practitioner
Subject Matter
Experts

Dialysis Facility
and Transplant
Professionals

ESRD Network
Staff

Kidney Care
Trade Association
Members

Centers for
Medicare &
Medicaid Services
(CMS) Leadership

What are Expert Teams?

Participants from varying levels of organizational performance, each with lived experience and knowledge, come together to support continual learning and improvement

Help others learn faster by sharing what worked and what didn't work around a particular case, situation, or circumstance

Bring the best possible solutions to the table

Expert Team Call Objectives

Prepare for improvement using shared clinical cases

Test processes through the application of knowledge from the cases

Use inquiry-based learning to problem solve

Examine clinical reasoning, problem solving, and decision making through lived experience

Act as a consultancy for behavior change and improvement

Questions to Run On. . . How Might We

- Provide patients the knowledge and skills to prevent unplanned hospitalizations?
- Improve communication between hospitals and dialysis facilities to reduce hospital readmissions?
- Assist patients with unstable support systems or financial issues that may impact hospitalizations and Emergency Department visits?

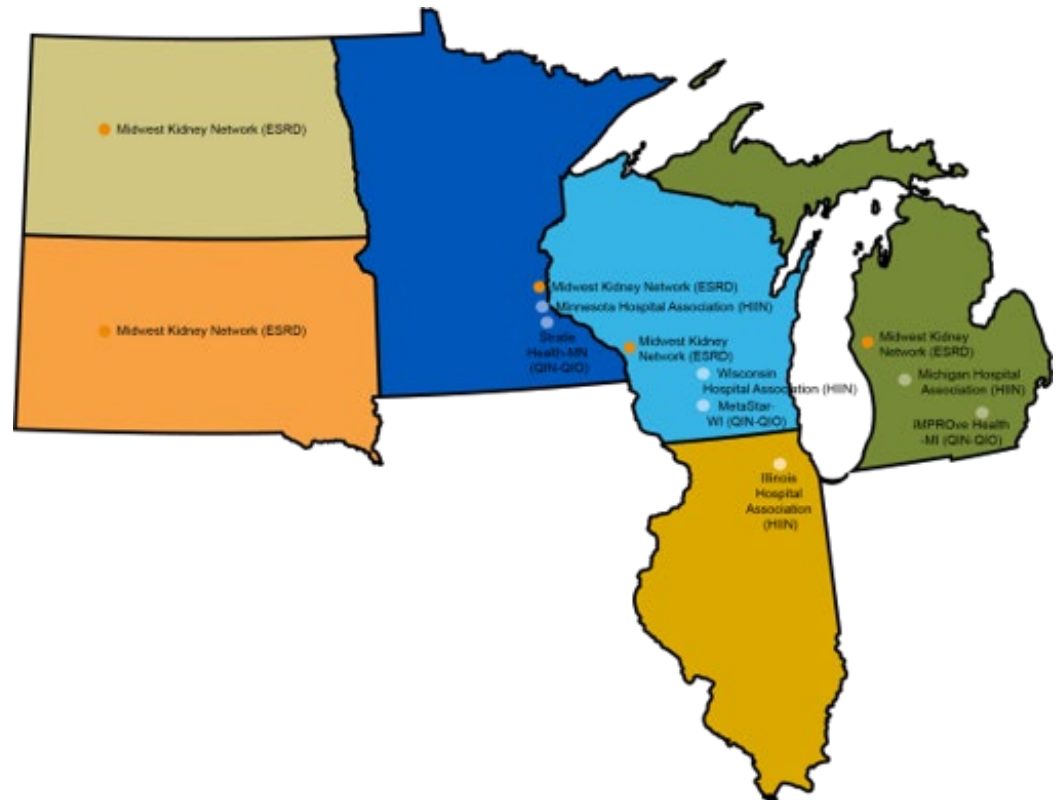

A QIO-ESRD Collaboration to Improve Transitions Across the Care Continuum

Claire Taylor-Schiller, RN
Quality Improvement Analyst
Midwest Kidney Network

Superior Health Quality Alliance

- Partnership between 8 member organizations
 - Midwest Kidney Network
 - 4 Hospital Associations (Illinois, Michigan, Minnesota, Wisconsin)
 - 3 QIOs (Stratis, iMPROve Health, MetaStar)

Superior Health Readmission Sprint

A QIO/ESRD Collaboration to Improve Transitions Across the Care Continuum

84 Participants from
31 Hospitals
17 Dialysis Facilities

Root Cause Analysis identified transitions in care processes as major contributors to readmission rates in dialysis patients

Common goal to reduce readmissions for Medicare beneficiaries in both QIO and ESRD Network statement of work

Collaborated to create and implement an improvement sprint for both hospital and dialysis facilities

A sprint is a rapid implementation program designed to amplify the impact of a facility's efforts on a given topic

	Invited Superior Health hospitals and dialysis facilities to enroll - personalized invitations to dialysis facilities with high readmission rates and/or local hospital registration
	Four learning webinars January 2023 – April 2023 to facilitate in-depth learning and foster interactive dialogue, sharing evidence-based tools and resources to develop tactical steps to implement innovations
	Dialysis facilities completed Transitions in Care Assessment to identify opportunities for improvement in transitions in care processes. The assessment was created based on the Forum of ESRD Network's Transitions of Care Toolkit and the MN Hospital Association Transitions in Care Roadmap
	Provided toolkit of resources to aid in addressing gaps identified on Transitions in Care Assessment
	Group collaboration in the social networking site, Superior Health Connect, to share challenges and best practices, and promote networking with colleagues across care systems and specialties
	Provide one-on-one coaching calls May 2023 and beyond to assist with follow-up needs and track progress upon conclusion of the sprint

SUPERIOR HEALTH
Quality Alliance

SUPERIOR HEALTH
Quality Alliance

Sprint Webinars

1. Kickoff – Introduction and Assessment
2. Action Plan and Desired Performance
3. Implementation Planning
4. Sustainability and Maintenance
5. Informal – sharing project progress, new barriers, best practices

1:1 coaching calls prn during sprint and scheduled after Webinar 4

Assessment – MHA Roadmap

Minnesota Hospital Association

Transitions in Care Road Map

MHA's road maps provide hospitals and health systems with evidence-based recommendations and standards for the development of topic-specific prevention and quality improvement programs, and are intended to align process improvements with outcome data. Road maps reflect published literature and guidance from relevant professional organizations and regulatory agencies, as well as identified proven practices. MHA quality and patient safety committees provide expert guidance and oversight to the various road maps.

Each road map is tiered into fundamental and advanced strategies:

- **Fundamental strategies** should be prioritized for implementation, and generally have a strong evidence base in published literature in addition to being supported by multiple professional bodies and regulatory agencies.
- **Advanced strategies** should be considered in addition to fundamental strategies when there is evidence the fundamental strategies are being implemented and adhered to consistently and there is evidence that rates are not decreasing and/or the pathogenesis (morbidity/mortality among patients) has changed.

Operational definitions are included to assist facility teams with road map auditing and identifying whether current work meets the intention behind each road map element.

Resources linked within the road map include journal articles, expert recommendations, electronic order sets and other pertinent tools which organizations need to assist in implementation of best practices.

Transitions in Care - A patient's journey of moving from one part of the continuum of care to another within the health care system.

Road map sections	Road map questions (if not present at your hospital or answering no, please see next column for suggested resources)	If specific road map element is missing, consider the following resources:
Safe transition teams/ culture	<p>FUNDAMENTAL (check each box if "yes")</p> <p><input type="checkbox"/> The facility has an established interdisciplinary team involved in implementing and maintaining the safe transitions of patients with representation from across the facility and meets on a routine basis.</p> <ul style="list-style-type: none"> - Develop a structured, tailored and multifaceted approach to overcome barriers and enhance protocols. <p><input type="checkbox"/> Interdisciplinary team has defined roles and expectations.</p> <ul style="list-style-type: none"> - Team includes a designated coordinator to lead/oversee transitions work and representatives involved in transitions work. 	<ul style="list-style-type: none"> • Joint Commission Sentinel Event 58 Alert • Clear communication between team members is crucial in ensuring patient safety. Consider the AHRQ TeamSTEPPS pocket guide for communication templates and overall TeamSTEPPS resources. AHRQ TeamSTEPPS Pocket Guide

Assessment – Dialysis Facility Transitions in Care

Dialysis Facility Transitions of Care Assessment

Each assessment survey question identifies fundamental and advanced strategies in transitions of care to assist facilities in identifying process gaps. If any of the concepts are missing in your facility, please see the accompanying toolkit for resources to assist in implementation of best practices.

1. The facility utilizes the following transitions of care **team and culture** concepts:

- Fundamental: The facility has an established interdisciplinary team involved in implementing and maintaining the safe transitions of patients with representation from across the facility and meets on a routine basis.
- Fundamental: The interdisciplinary team has defined roles and expectations. The team includes a designated coordinator to lead/oversee transitions of care work and representatives involved in transitions work.
- Fundamental: The interdisciplinary team reassesses patients monthly who experience extended or frequent hospitalizations, defined in the conditions for coverage as hospitalizations longer than 15 days, or more than 3 hospitalizations in a month.
- Advanced: Leadership sets expectations and accountability for established culture of safety to support patient transitions of care.
- Advanced: The facility has developed and maintained active partnerships with organizations in the

- Survey Monkey
- Followed similar concepts from hospital road map
- Utilized Forum Transitions in Care Toolkit, Hospitalization Change Package, Conditions for Coverage to guide concept development
- Shared results back with individual facility and aggregate responses

Areas of Greatest Opportunity – Dialysis Facilities

Staff Education: Expectations and supporting education regarding transitions of care have been incorporated into orientation

Team and Culture: The IDT team has defined roles and expectations. Team includes a designated coordinator to lead/oversee transitions of care work.

Quality Improvement: Identifies metrics to analyze focused on reducing readmissions including: all-cause readmissions, potentially preventable readmissions, stratification by diagnosis, etc. Team reviews metrics as part of QAPI program

Medication Management: Reviews dialysis-related medications given in the hospital and updates nephrologist on changes made to dialysis medications during hospitalization

Patient Education: Patient and family are provided with written contact information for dialysis and primary care providers

TRACKING READMISSION DATA

There are various ways to track readmission data for dialysis facilities, each with their pros and cons. The sections below will describe some of the different approaches in tracking readmission data.

STANDARDIZED READMISSION RATIO

The standardized readmission ratio is available to facilities on the dialysis facility report and updated on a quarterly basis. The ratio, however, is not as intuitive to understand, and based on a more complex calculation. Additionally, the ratio is typically not based on the most recent data. The ratio does include all-cause readmissions. The technical specifications can be found here: [CY 2023 QIP Technical Specifications](#)

READMISSION RATE PROVIDED ON NETWORK FACILITY REPORT

The readmission rate provided from the Midwest Kidney Network on the monthly facility specific report is expressed as a percentage of hospital admissions that occurred within 30 days of discharge from a previous hospital admission for Medicare patients. This rate the Network receives directly from the ESRD NCC Data Warehouse based on Medicare claims. The most recent data is from the previous month, making it a timely reflection of the rate.

However, the only hospitalizations that are included in this rate are those that have a primary diagnosis code on the Medicare claim from the list of Primary Diagnosis Categories found here: [Primary Diagnosis Codes](#). Although this rate is intuitively easy to understand and readily obtained from the Network, it is not inclusive of all-cause admissions and if used solely, can provide a false sense of a low rate as it does not capture all patients and all hospitalizations. Using this as the only metric to track readmission rates will not accurately show the true picture of readmissions at the dialysis clinic.

INTERNAL DATA TRACKING

Tracking all hospitalizations and readmissions within 30 days of discharge through internal tracking tools (using electronic health records, Excel spreadsheets, etc.) can be the most burdensome on time and resources, especially with initially establishing the process. However, this method will most accurately reflect the true rate at the clinic, as well as be easily understood. The recommended interval for completing this is monthly, as well as maintaining a rolling 12-month rate.

Estimation of relative treatment effects of comprehensive disease-modifying pharmacologic therapy on key cardiovascular events

Compared with ACE/ARB+BB:
Comprehensive Rx including ARNI+BB+MRA+SGLT2)
 HR 0.38 CV death / HF hospitalization
 HR 0.50 CV death
 HR 0.32 HF hospitalization
 HR 0.53 mortality

Compared with ACE/ARB + BB:

1. Switch to ARNI
2. Start MRA therapy
3. Start SGLT2 therapy

Extend your HFrEF patient's life by 6.3 years*

Questions and Answer Discussion

Top Take-Aways – Putting Knowledge Into Action

What is one thing you learned today that you could start doing immediately?

How will this action improve your current way of doing the practice/process?

Who is involved and how can they support the action to make it sustainable?

Recap & Next Steps

- Additional pathways for learning
 - Sharing Best Practices to a greater community through coalition meetings
 - Using Case Study examples to identify new ways of doing something or missed opportunities
- Next meeting – June 20, 2023 @ 2 pm ET
